

Application Squeegees... To apply floor/surface coating systems

78546
A "Complete Tool."
16" application squeegee frame with a 16", no-notch (flat) EPDM blade. Milled threaded handle adapter.

78128
A "Complete Tool."
24" application squeegee frame with a 24", 1/8" notched EPDM blade. Milled threaded handle adapter.

EPDM (solvent resistant) blades are reversible (notched on both sides), for added value

Red Rubber blades are also solvent resistant and more flexible

- 1 Choose the frame
- 2 Buy the blade

Additional frame and blade widths are available (up to 48")

EXCLUSIVE

Rubber is also available by the roll - see price guide for details.

Gauge Rakes

Wire Gauge Rake

CAM® Gauge Rake

The **Wire Gauge Rake** is used to apply self-leveling floor coatings and lower viscosity materials. It is far superior to pin-type gauge rakes on the market. **The strong spring-steel wires are formed in a "radial" or loop fashion. This eliminates chatter and vibration common with pin-type gauge rakes. The multiple contact points make this tool an excellent choice when working on pitted or uneven surfaces, as some of the points will maintain the desired level or depth of application even at varying handle angles and lengths. Replacement wires are available.**
